

A close-up photograph of a glass surface covered with numerous water droplets of varying sizes. The droplets are in sharp focus, creating a textured, bubbly appearance. The lighting is soft, highlighting the rounded shapes of the water molecules.

LUXURY SHOWER DOORS

by KL[®]megla

Luxury Shower Doors

by KL[®]megla

With design trends ranging from the bold and colorful to the simple and elegant, the 21st century bathroom has evolved into the centerpiece of the modern home. The bathroom has become a place of retreat from hectic lifestyles and an ever present source of relaxation and rejuvenation. Adding a luxurious shower is high on the wish list of every renovation project.

Frameless glass shower enclosures introduce a modern feel and an inviting ambiance to the bathing space. Spacious showers and wet rooms are now the preferred choice of conscientious consumers, however bathrooms come in all shapes and sizes. Whether the project calls for a large frameless shower door system or a space-saving tub & shower enclosure, KL[®]megla has the solution.

ATLANTICA®

The seminal design of the Atlantica® propelled it to international stardom during the evolution of the frameless shower door industry in the mid 90's. It's timeless contours are as fashionable today as they were at its advent. Our groundbreaking stepless adjustability was perfected in the Atlantica, but we did not stop there. We designed a scalloped back plate, added high quality gaskets that bond to the glass to prevent slippage, and even developed a fully machined cover plate to conceal the screws in the wall plate. A quintessential symbol of luxury and attention to detail, the Atlantica® continues to set the industry-wide standards for quality and durability.

d•LUX

Inspired by the trend-setting design of the KL Classic, the d•Lux is loaded with features. Its fully machined brass covers fit perfectly over its back and wall plates, leaving nothing to distract from its clean lines and unrivaled finishes. Its index position is fully adjustable, and it features the renowned "pocketed" gaskets that earned our heavy glass product line international acclaim. The d•Lux is designed to accommodate both 3/8" & 1/2" glass, and will support 120 lbs. on a pair of hinges. From its non-slip gaskets to its scalloped wall plate, the d•Lux is manufactured with the same attention to detail that our customers have come to know and expect.

KL[®]megla Quality

We proudly source only the finest quality materials in our product lines. Manufacturing from solid German brass, titanium, and stainless steel with the strictest standards allows us to consistently deliver the world-class products that our customers have come to know and expect. KL[®]megla also works closely with leading design trend forecasters to ensure that its products reflect a timeless appeal.

With our history of technical advances, a distinguished in-house design team, and unrivaled reputation for quality, KL[®]megla is setting the pace for the 21st century.

QUADRATO

Lauded by designers and architects the world over, the Quadrato has garnered industry-wide praise since its debut a few years ago. Our engineers undertook the daunting challenge of pouring our litany of award winning features into this compact hinge. The result was an overwhelming success. Standing just under 2.5" tall, its sturdy form is as hardwearing as they come. The Quadrato integrates art and innovation, delivering impressive functionality encased in its flawless design.

FIT

Our Fit hinge epitomizes expert craftsmanship. Featuring some of the tightest gaps of any hinge in our product line, Fit was designed to defend against water leaks. It boasts a scalloped wall plate for a tighter fit between the seal and the wall and custom leak guards between the wall plate and the tram as an added measure of protection. Equipped with custom bumpers to protect our unrivaled finishes and a matching cover for the wall plate, the Fit hinge is truly extraordinary.

Endless Possibilities

Our distinguished team of designers and technical experts have created and tested over 500 different shower designs. This has given us the experience and resources necessary to support you in virtually any custom shower design you can imagine. The possibilities are endless.

WELLNESS

WELLNESS PREMIUM

INTELLIGENT GLASS

First developed as a promotional prototype, our Intelligent Glass applications have exploded in popularity. We have made remarkable breakthroughs in technology. Our “Smart Touch” glass, for instance, allows its operator to control temperature and water pressure without stepping into their shower or touching a single valve. Our LED glass is actually powered by our conductive Wellness EQ Hinges (featured on the left).

KL PIVOT

The KL Pivot remains one of the most popular hinges in the frameless shower door marketplace today. It's smaller than most hinges, but boasts an incredible load capacity of 140 pounds per pair. Its index position is adjustable to any angle, and its versatility make it extremely quick to install. It can be mounted to the floor, the ceiling, the wall, a header, or even a fixed glass panel--providing unmatched flexibility for any frameless shower design.

KL CLASSIC

Aptly named, the KL Classic is the quintessential frameless shower door hinge. For the last 20 years it has remained untouchable. Many have desperately tried to imitate its design, but none have succeeded in matching its strength or durability. One of its most popular features is its pocketed gaskets. Over time, all gaskets tend to flatten out, or "pancake" on the glass. As they lose their elasticity, the door begins slipping, which causes the hinges to "pop" and could even cause the door to fall. Our patented design is recessed into the hinge itself, preventing any possibility of flattening out and losing grip on the door. The KL Classic comes standard with a reversible 5° pin for extra pressure if desired.

CROSSOVER PUR

The Crossover Pur is much more than a “heaving” hinge. Its free swinging design naturally returns to a gravity based index position that can be adjusted to any angle in the hinge’s arc. This is instrumental for uneven floor services, floor drains, thresholds, etc. It can be adjusted at anytime--even after installation. Meticulously crafted from fine German brass in unrivaled finishes, the Crossover Pur adds a modern, elegant touch to any frameless shower enclosure.

CROSSOVER CL

The Crossover CL combines the continuously adjustable, gravity based design of the Crossover Pur with countersunk screws. The countersunk screw heads are slotted to allow for flexibility during installation. Most countersunk screws come with a cheap plastic washer to protect the glass. Our countersunk screws are machined from fine German Brass and then dipped in rubberized plastic, thereby protecting the glass and ensuring a long lifespan.

Harmony

We have had over 500 variations of our shower door enclosures tested and certified by the TUV. We can help you design your bathing space, offer you creative suggestions, and suggest hardware and finishes to compliment your fixtures. Our peerless finishes are truly remarkable; from quality finishes like polished chrome and brushed nickel, to more rare finishes like oil-rubbed bronze and 24 karat gold plated, our finishes set the standard by which all others are measured.

KL®megla Seals

We proudly offer the highest quality vinyls and polycarbonates available on the market. In addition to their quality, we designed every seal to accommodate both 3/8" and 1/2" glass. As your KL®megla representative for a sample today!

Premium Adjustable Fittings

KL®megla holds intellectual property rights in various countries, protecting the technical advances we have made in the adjustability of our hinges. In order to adjust most hinges, the installers are required to take the door itself down from the wall. Using our patented "stepless adjustability", KL®megla hinges can be easily adjusted before and even after installation. No removal of backplate necessary. Each hinge comes with a small hex screw. Loosen it, adjust the hinge, and tighten it back up with ease.

The Milano Premium perfectly blends form and function. Clean, sharp lines define its iconic shape, complimented by its fully machined backplate and wall plate covers, leaving no visible screw exposed. True beauty however, lies beneath the surface. The Milano Premium is packed with features. In addition to being a true 180° hinge, it features extremely tight gaps, our renowned stepless adjustability, non-slip gaskets and custom bumpers to protect its peerless finishes. As artistic as it is practical, the Milano Premium is truly a triumph of German engineering.

MILANO

MILANO PUR

MILANO PREMIUM

Wall Shims

Installation can be challenging when shower walls are out of plumb. KL®megla adapters are available in a wide range of thicknesses, allowing you to accurately plumb the wall from bottom plate to top plate.

Certified Safety

All KL®megla shower door hinges have been tested and certified to be in the prestigious international ratings agency, the TUV, ensuring precise compliance with the European Norm. In addition, KL®megla has tested and certified over 500 variations of its shower door systems, as well as many of its of commercial and residential glass door systems. Most hinges sag over time, creating a nightmare and an eyesore for frameless glass showers. Our hinges, on the other hand, are tested to 100,000 cycles -- that's two showers per day, every day, for 140 years!

ICETEC INDOOR

Engineered with advanced German technology, Ictec is a luxury shower door designed to add the finishing touch to the modern bathroom. Ictec shower doors are available in either a countersunk hinge design or as a sliding set. Our sliders feature two sets of silent, smooth rollers that glide effortlessly over the door's solid stainless steel bar without flexing or friction. Made of stainless steel and high performance engineered polymer, each set of rollers can support up to 225 pounds in weight. This incredible weight capacity enables the shower door to be manufactured from one single pane of glass, giving the door a simple, minimalist look. Each Ictec set is available in either a brushed stainless steel or a polished stainless steel finish.

Ictec offers designers and architects nearly unlimited options to tailor the door's size to match any specifications—from standard sizes to floor-to-ceiling designs. The sliding system is available in wall mounted, glass mounted, or ceiling mounted sets, and is adjustable in height and wall distance, making installation extremely flexible. It is available for 1/4" - 3/8" glass, with most systems available in 1/2" upon request.

ICETEC CL

ICETEC FLEXIBLE

THE CLASSTEC SERIES

KL®megla is proud to announce our new economy series, featuring the Classtec Classic and Classtec Summit hinges. Over the years, we have received countless requests for an affordable product line, and we have responded powerfully. Unlike the vast majority of hardware manufacturers today that sacrifice quality in their quest for affordability, our unwavering dedication to craftsmanship is visibly evident in our Classtec series. We researched the most popular hinge styles in current demand, and tasked our distinguished team of designers and engineers to create an economy line worthy of the KL®megla brand reputation. The Classtec Classic and Summit hinges are leagues ahead of the product lines they were designed to compete with. After machining them from fine German brass, we added our high quality, non-slip gaskets, stronger springs, a stronger pin, and the highest quality finishes available today. Impeccably well designed, the Classtec Series redefines affordable elegance.
